

My Short Abstracted Coding standarts

Explain: write short and concice comment to all methodes and more detailed descriptions to things that are hard to read/understand/unknown

Divide: seperate all code based on functionality this should hold true on both a class and methode level. A methode should do 1 thing and a class should serve 1 purpose

Name: Names should follow functions. without reading any code or comments on your classes or methodes people should be able to understand their functions (FindSmallest, Calculator)
